

Jan Ligas
Arizon Structures
2 Hope Street
Montvale, NJ 07645

Dear Jan:

Allow me to share, in writing, my immense satisfaction with the work your company did on the replacement air structure for our EMI test site. Over the past 3 years, I have been directly responsible for numerous construction projects. During that time, I can honestly say that Arizon is one of the very best suppliers that I have dealt with. I am especially pleased considering that our project is physically small in size compared to what is typical for your industry. Arizon treated our project as if it were large and high-dollar. Additional, CKC's project had the unusual requirement of needing to be completely non-metallic. Arizon had experience with our non-metallic requirement and also made valuable product recommendations that will improve the performance of our test site in wet weather.

The Arizon staff who handled our project was very knowledgeable, professional and courteous. Phone calls were returned promptly, information was provided as promised and the project was delivered on-schedule. The Arizon engineers who came to our site were fantastic. German Buitrago did a great job of verifying measurements and special conditions on his pre-production site inspection. As our project was the replacement of a 17 year-old failed structure (not an Arizon product), we appreciated German's insight and recommendations. Scott Manuel from Arizon came to CKC to supervise the installation. Scott was very knowledgeable and helpful to our general contractor. With Scott's valuable assistance, our new structure was installed, tested and operational in less than one day. Scott also provided much valuable advice regarding long-term structure care and maintenance.

Please use this letter and / or my name as a reference for future projects. I would be happy to speak to your potential clients about my positive experience with Arizon, from the initial contact to our fantastic new air structure working hard for us 24/7/365.

Sincerely,
